|--------------------------------------------------------------------------------------------------|------------|
| Foreword                                                                                         | 3          |
| Basic statistics of the Slovak Republic, 2025                                                    | 7          |
| Executive summary                                                                                | 8          |
| <b>1 Strengthening growth and fiscal prospects</b>                                               | <b>17</b>  |
| 1.1. Reducing the fiscal deficit in a weak economic environment                                  | 18         |
| 1.2. Maintaining financial stability                                                             | 23         |
| 1.3. Building an integrated strategy to boost long-term growth and restore fiscal sustainability | 28         |
| References                                                                                       | 52         |
| <b>2 Boosting economy-wide competitiveness amid acute automotive sector challenges</b>           | <b>57</b>  |
| 2.1. Slowing economic growth with significant challenges on the horizon                          | 58         |
| 2.2. Improving the business environment to support growth                                        | 63         |
| 2.3. Strengthening public and private investment                                                 | 80         |
| 2.4. Tackling pressing skills shortages                                                          | 89         |
| References                                                                                       | 99         |
| <b>3 Reaping the economic benefits from AI</b>                                                   | <b>107</b> |
| 3.1. Slovakia has much to gain from embracing AI                                                 | 108        |
| 3.2. AI adoption remains limited but is growing                                                  | 109        |
| 3.3. Fostering AI adoption in the business and public sectors                                    | 111        |
| 3.4. Boosting advanced AI research                                                               | 114        |
| 3.5. Increasing access to capital, data, and computer infrastructure                             | 115        |
| 3.6. Supporting companies in navigating the regulatory landscape                                 | 117        |
| 3.7. Addressing AI-related skills shortages                                                      | 118        |
| References                                                                                       | 124        |
| <b>4 Unlocking the Potential of the Net-Zero Transition and Adapting to Climate Change</b>       | <b>129</b> |
| 4.1. Seizing economic opportunities from the net zero transition                                 | 130        |
| 4.2. Reducing greenhouse gas emissions                                                           | 137        |
| 4.3. Adapting to climate change                                                                  | 141        |
| References                                                                                       | 146        |
